Introduction

This is a complete step-by-step guide for installing XAMPP, configuring Apache and MySQL services, deploying WordPress, and upgrading PHP and phpMyAdmin using PowerShell on Windows.

Article

Access the Article from the URL : <https://www.linkedin.com/pulse/complete-guide-installing-xampp-configuring-apache-liyanarachchi-6fqzc>

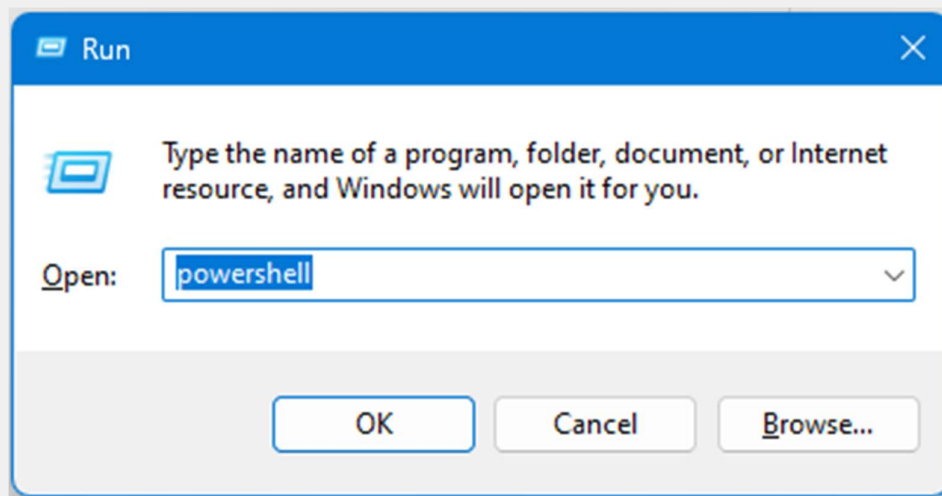

GitHub Repository

Access the GitHub Repository from the URL : <https://github.com/NithilaLD/XAMPP-Wordpress-Powershell-Guide>

Complete Guide

XAMPP Installation

Press the **Windows key + R** to open the Run dialog box. Type **powershell** into the text field. Press **Ctrl + Shift + Enter** to Open the **PowerShell** with **administrator** access.

Dulan Nithila Liyanarachchi

Then Go to the Website

["https://sourceforge.net/projects/xampp/files/XAMPP%20Windows/8.0.30/xampp-windows-x64-8.0.30-0-VS16-installer.exe/download"](https://sourceforge.net/projects/xampp/files/XAMPP%20Windows/8.0.30/xampp-windows-x64-8.0.30-0-VS16-installer.exe/download)

using the below command.

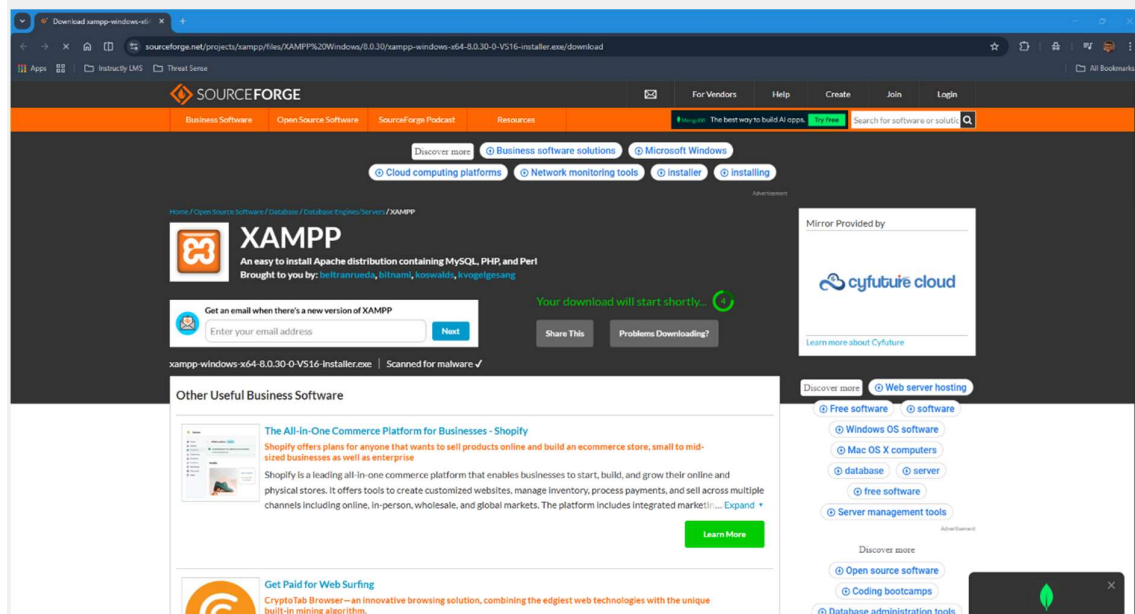

Start-Process

"https://sourceforge.net/projects/xampp/files/XAMPP%20Windows/8.0.30/xampp-windows-x64-8.0.30-0-VS16-installer.exe/download"

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\WINDOWS\system32> Start-Process "https://sourceforge.net/projects/xampp/files/XAMPP%20Windows/8.0.30/xampp-windows-x64-8.0.30-0-VS16-installer.exe/download"
PS C:\WINDOWS\system32>
```

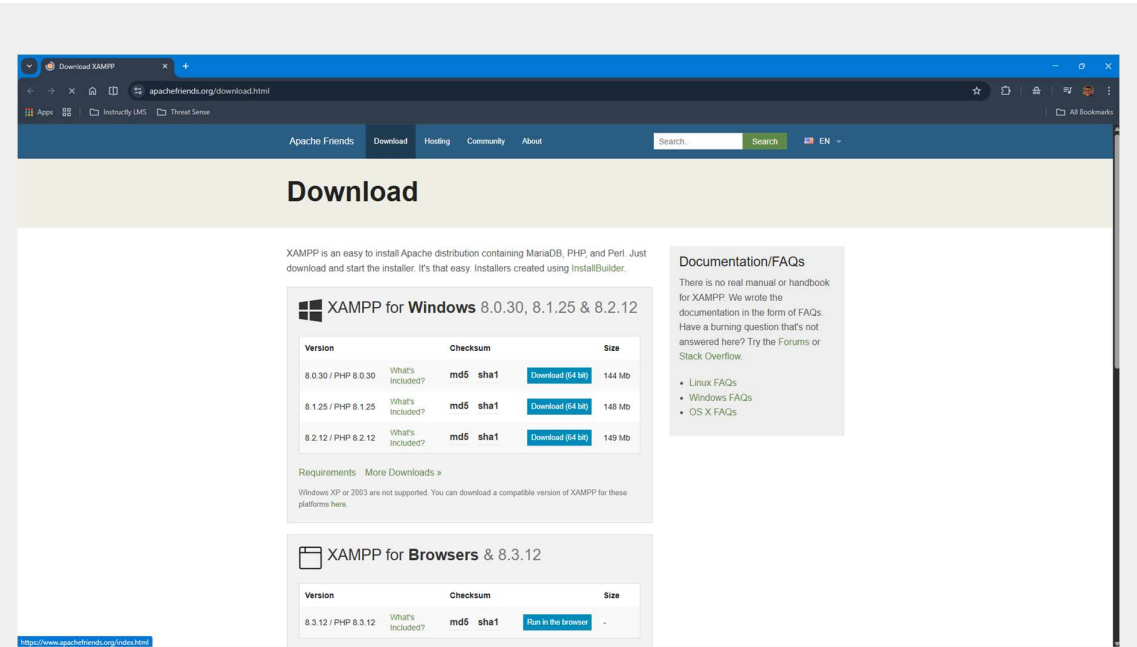

The file will start downloading within 5 seconds after opening the above website. If it is not working open

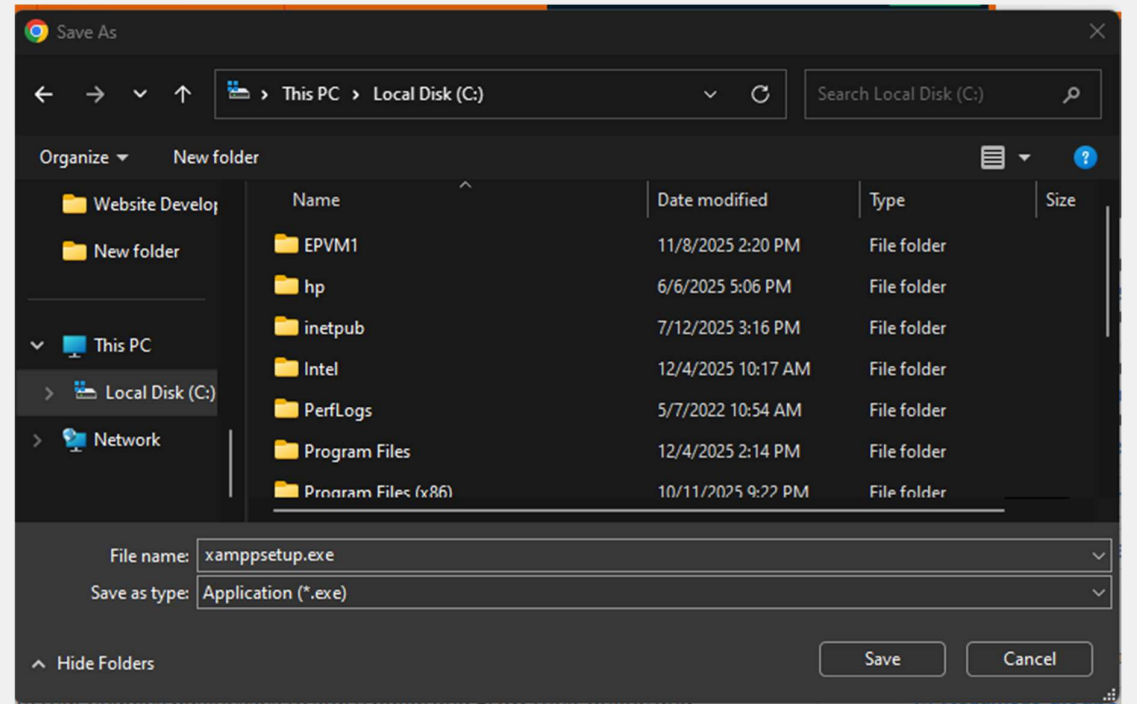

<https://sourceforge.net/projects/xampp/files/XAMPP%20Windows/8.0.30/xampp-windows-x64-8.0.30-0-VS16-installer.exe/download>

or go to <https://www.apachefriends.org/download.html> and download the exe manually.

Dulan Nithila Liyanarachchi

After downloading save it in **c drive C:** with the file name as **xamppsetup.exe**.

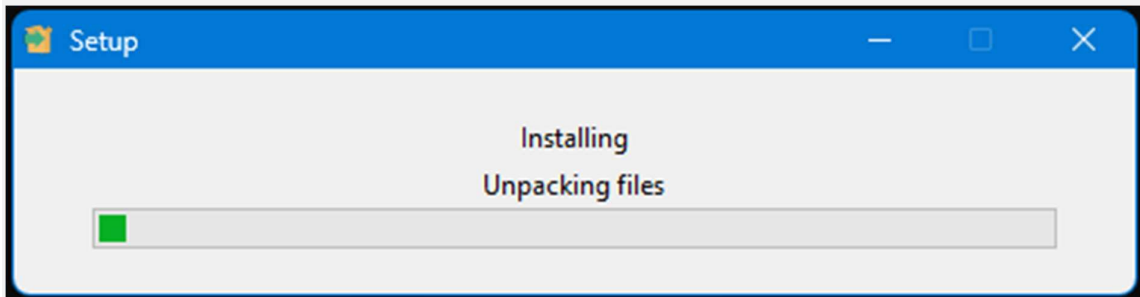

Dulan Nithila Liyanarachchi

Next Install **xampp** in **c drive C:**

```
cd C:\
```

```
c:\xamppsetup.exe --unattendedmodeui minimal --mode unattended
```

```
PS C:\WINDOWS\system32> cd C:\
PS C:\> c:\xamppsetup.exe --unattendedmodeui minimal --mode unattended
PS C:\> _
```

You should wait for couple of minutes to allow xampp to be installed. During this time, no messages will be displayed. You will need to check your folders in **C:** to inspect the progress. (You will have a new "**xampp**" folder in the root of **drive C**). After Finishing the installation go to subfolder **c:\xampp** and check if there are many files or not.

```
cd xampp
```

```
dir
```

Dulan Nithila Liyanarachchi

```
Administrator: Windows PowerShell
PS C:\> cd xampp
PS C:\xampp> dir

Directory: C:\xampp

-a-----        3/30/2013    5:59 PM     118784 xampp_stop.exe

PS C:\xampp>
```

If there are few files then installation is not done properly. At that situation uninstall xampp using following command and do the previous steps again. You should wait for couple of minutes to allow **xampp** to be uninstalled. During this time, no messages will be displayed. You will need to check your folders in **C:** to inspect the progress. (The "**xampp**" folder in the root of **drive C** will be deleted at the end of uninstallation).

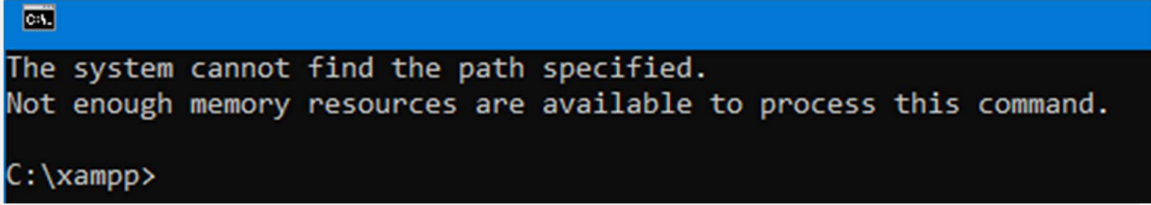

```
cd C:\
C:\xampp\uninstall.exe
```

```
Administrator: Windows PowerShell
PS C:\xampp> cd C:\
PS C:\> C:\xampp\uninstall.exe
PS C:\>
```

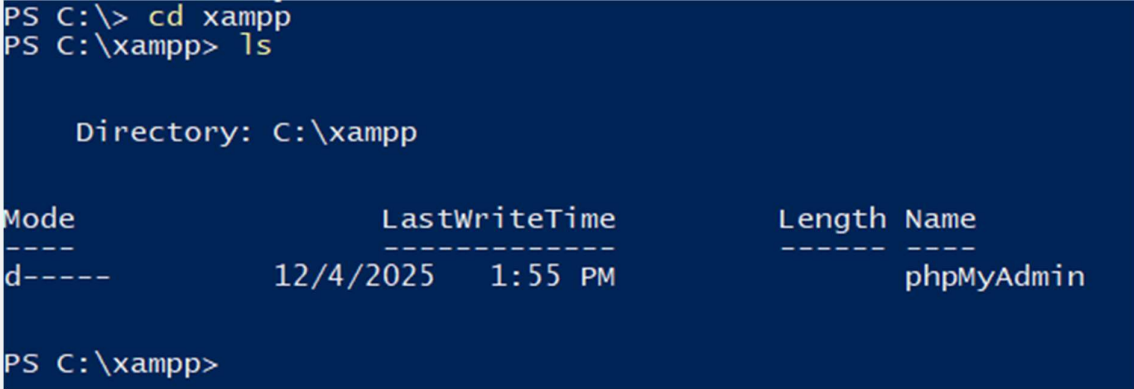

Dulan Nithila Liyanarachchi

If the below Command Prompt window opens automatically then close it because until it closed the uninstallation is become stopped(At Most times it will show twice. It doesn't matter how many times it appears just close it at both times.

```
C:\>  
The system cannot find the path specified.  
Not enough memory resources are available to process this command.  
C:\xampp>
```

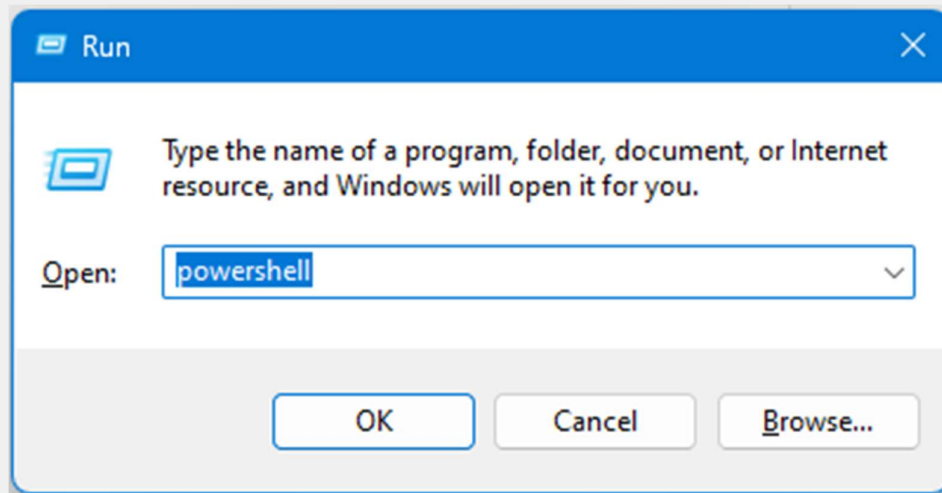

Sometimes some folders like phymyadmin will be left inside the xampp after the uninstallation too. Because of this the xampp folder won't be deleted in some cases. In this situation manually delete the xampp folder permanently.

```
PS C:\> cd xampp  
PS C:\xampp> ls  
  
Directory: C:\xampp  
  
Mode                LastWriteTime         Length Name  
----                -  
d-----          12/4/2025   1:55 PM             phpMyAdmin  
  
PS C:\xampp>
```

Apache Service Installation

Press the **Windows key + R** to open the Run dialog box. Type **powershell** into the text field. Press **Ctrl + Shift + Enter** to Open the PowerShell with administrator access.

Dulan Nithila Liyanarachchi

Go to apache\bin folder and check if there is ApacheMonitor.exe,

```
cd c:\xampp\apache\bin
```

```
dir
```

```
dir ap*
```

```

MySQL Service Installation

Press the **Windows key + R** to open the Run dialog box. Type **powershell** into the text field. Press **Ctrl + Shift + Enter** to Open the PowerShell with administrator access.

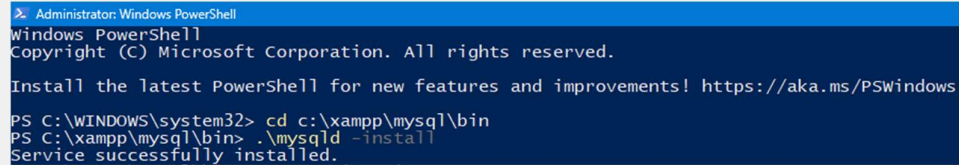

Dulan Nithila Liyanarachchi

Go to folder `c:\xampp\mysql\bin` and

`cd c:\xampp\mysql\bin`

Run the install command below to install mysql

`.\mysqld -install`

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\WINDOWS\system32> cd c:\xampp\mysql\bin
PS C:\xampp\mysql\bin> .\mysqld -install
Service successfully installed.
```

Check if MySQL has been installed (service is up)

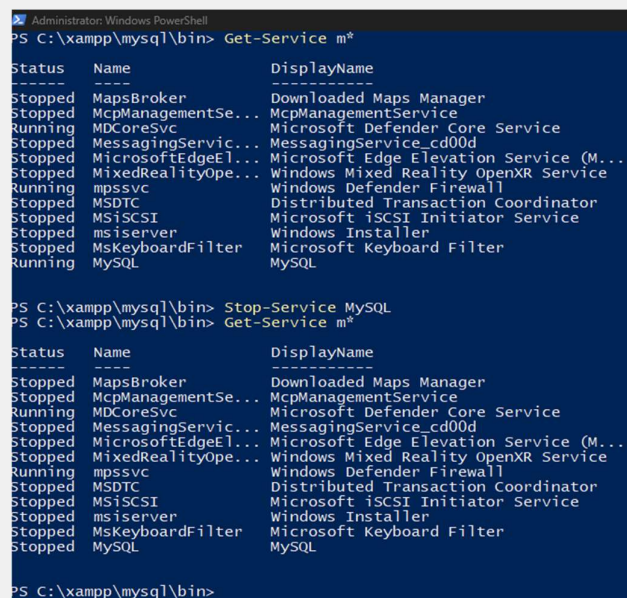

`Get-Service m*`

If It is running then stop it using the following command.

`Stop-Service MySQL`

Check again that the Service is stopped or not. If not stop it again using above command.

`Get-Service m*`

```
Administrator: Windows PowerShell
PS C:\xampp\mysql\bin> Get-Service m*

WordPress Installation and Configuration on XAMPP Server

Press the **Windows key + R** to open the Run dialog box. Type **powershell** into the text field. Press **Ctrl + Shift + Enter** to Open the PowerShell with administrator access.

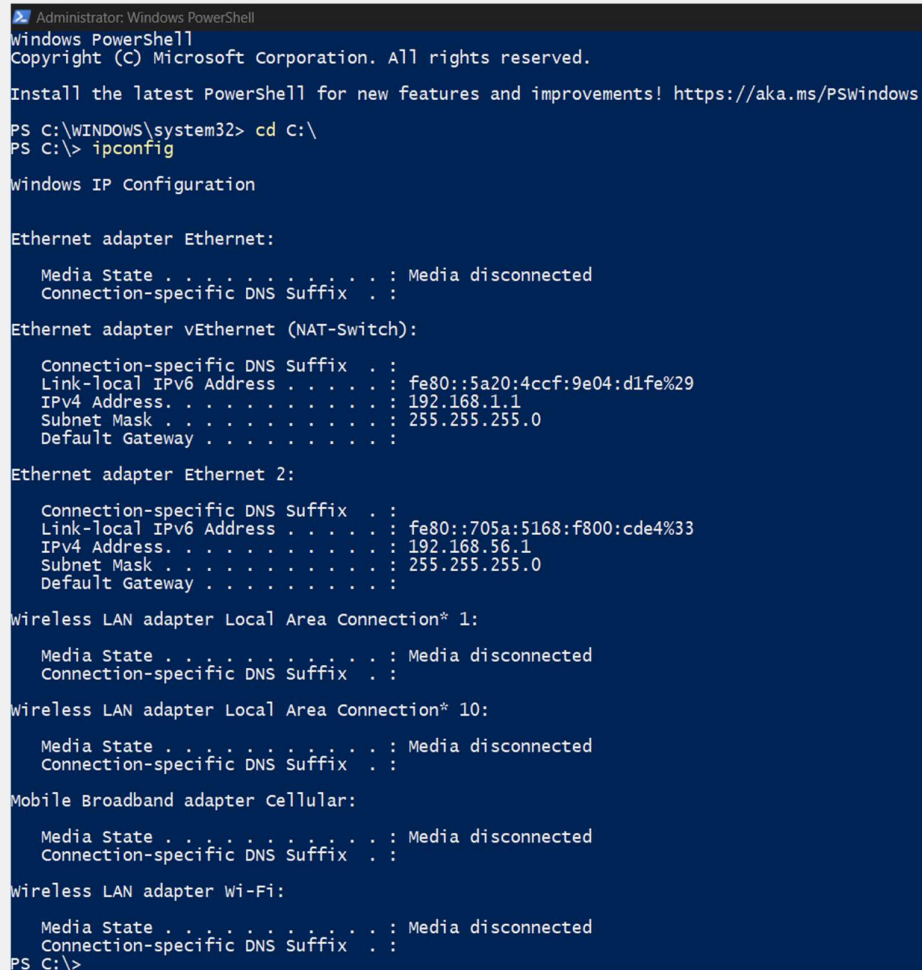

Dulan Nithila Liyanarachchi

Go to **C: drive**

```
cd c:\
```

Get the **IP of the local computer(localIP)**

```
ipconfig
```

```

PS C:\>
```

See If The **Apache 2.4** Service is running or not

```
Get-Service a*
```

If it is not running then Start The Service otherwise do nothing

```
Start-Service Apache2.4
```

Dulan Nithila Liyanarachchi

See if The **MySQL** Service is running or not

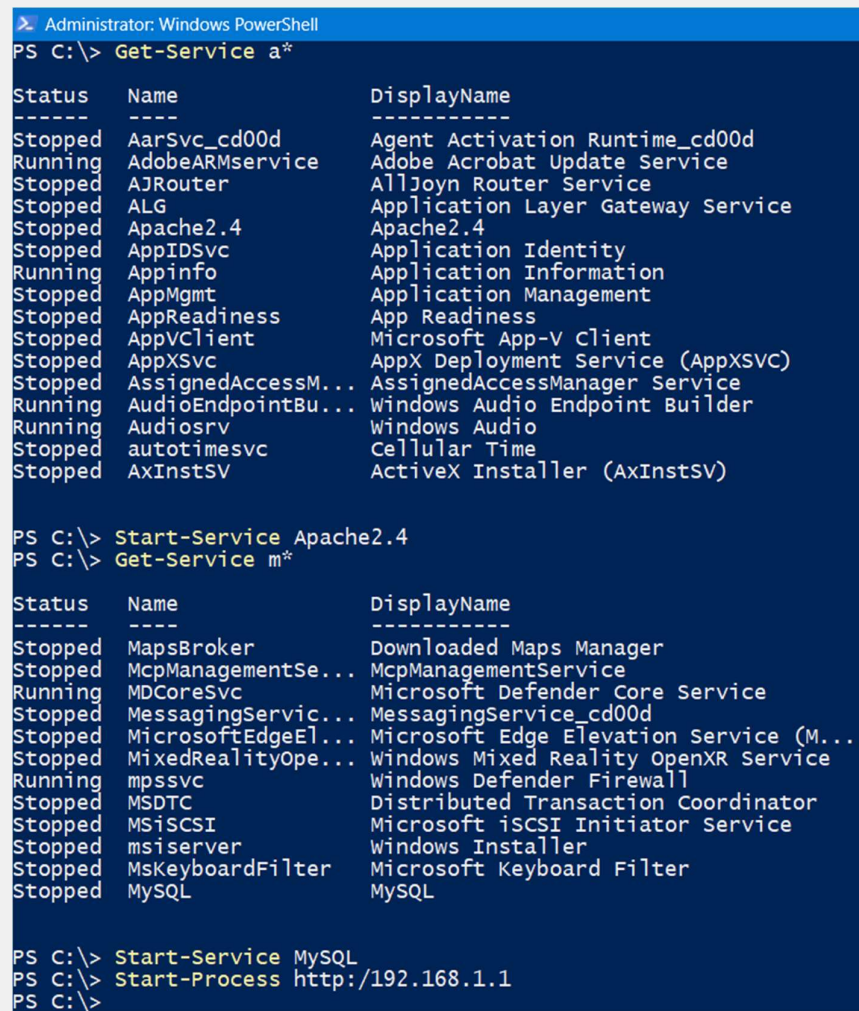

```
Get-Service m*
```

Start The **MySQL** Service

```
Start-Service MySQL
```

Access **http://localIP** via browser (**localIP** is the IP of the machine) Also **localhost** instead of **localIP** can be used. In the whole guide localIP is used but the better way is using localhost.

```
Start-Process http://localIP
```

```
> Administrator: Windows PowerShell

Dulan Nithila Liyanarachchi

Then, access **http://localIP/phpmyadmin**

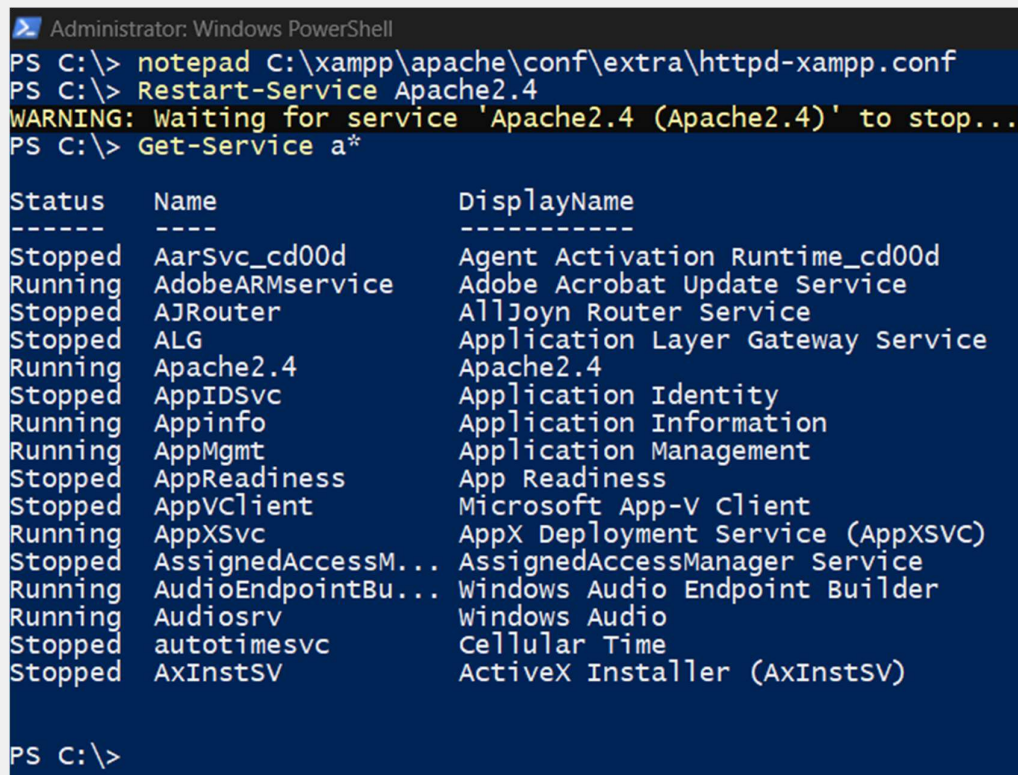

Start-Process http://localIP/phpmyadmin

If It fails, you will need to check the **IP configuration** in **httpd-xampp.conf** file modified in the last step. The file is at **C:\xampp\apache\conf\extra** folder. In the file after every line where **"Require local"** is stated add **"Require localIP"** as a new line (**localIP** is the **IP of the machine**). Then Restart the Apache 2.4 Service and verify that the service is perfectly running or not. After IP configuration issue is resolved then do the above steps again.

```
notepad C:\xampp\apache\conf\extra\httpd-xampp.conf
```

```
Restart-Service Apache2.4
```

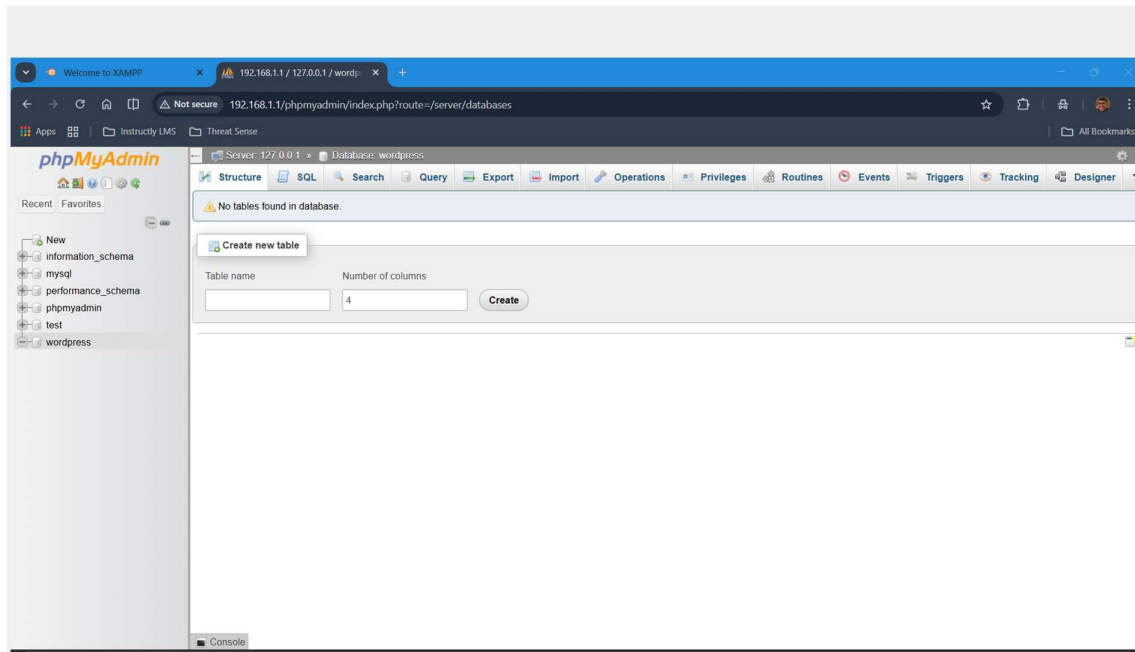

```
Administrator: Windows PowerShell

```

Create **new database**. Set the database name as **"WordPress"** then create it. (You may need to **install Google Chrome** if your **IE Explorer** cannot work with **phpMyAdmin**). Then IT Will open the database **"wordpress"** automatically

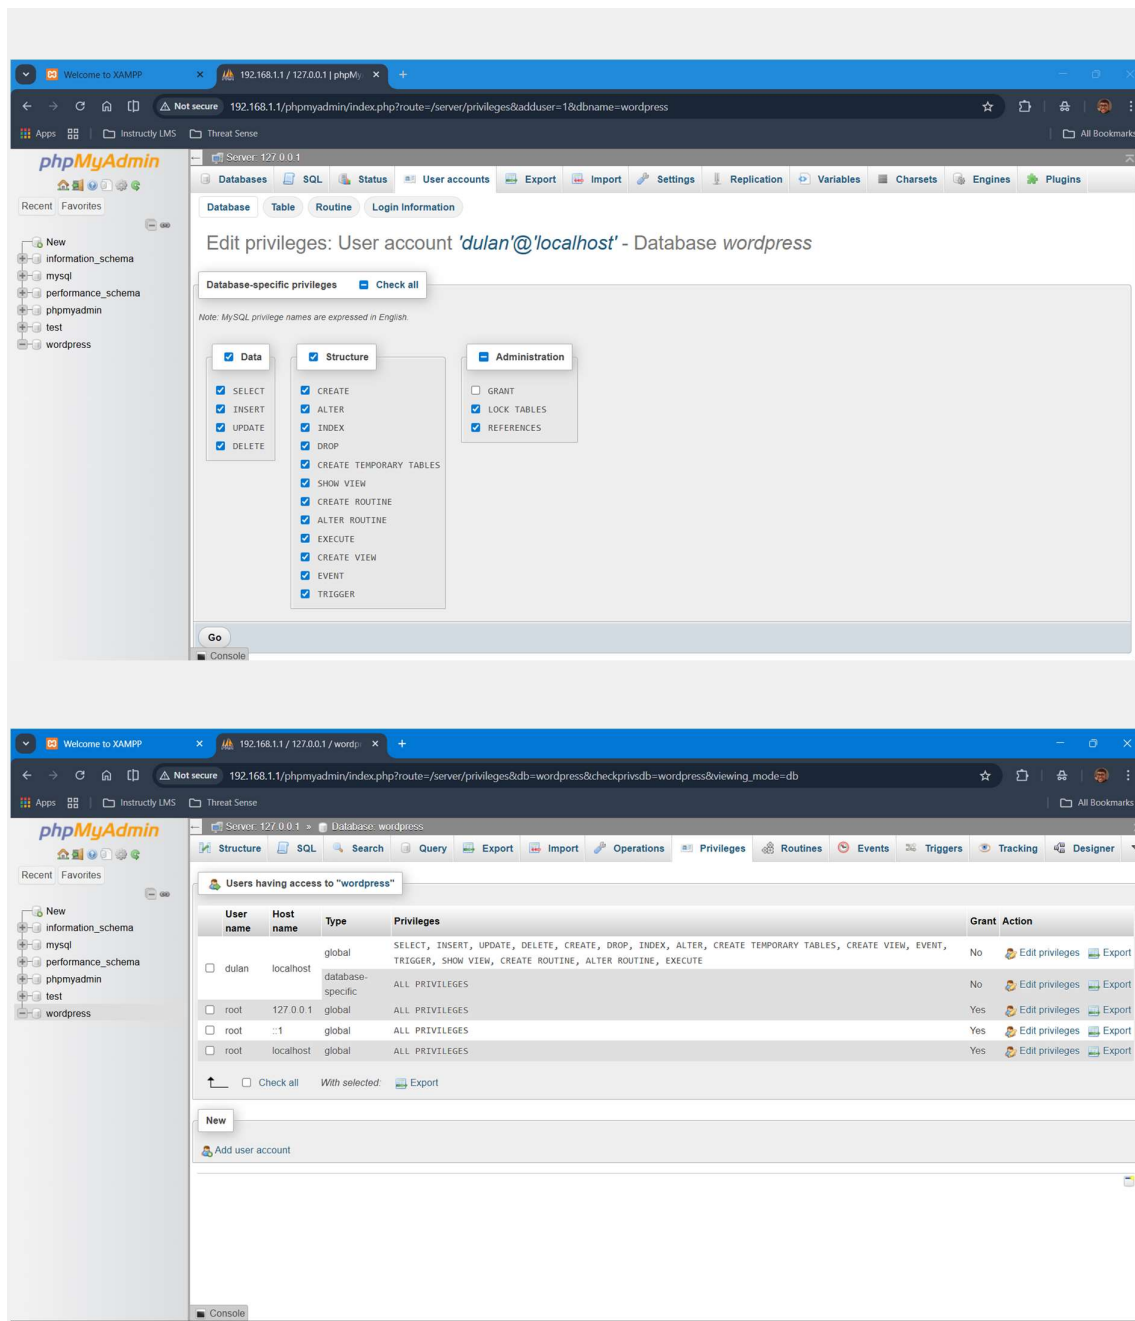

Dulan Nithila Liyanarachchi

Go to **privileges** section, add new user with the username "**yourname**", host name is **LOCAL**, and a password (e.g., **yourname123**) then select "**data**" and "**structure**" all boxes and click "GO" at the bottom left corner.

Dulan Nithila Liyanarachchi

Download **WordPress** zip file using the below command.

Start-Process "https://wordpress.org/latest.zip"

```
Administrator: Windows PowerShell
PS C:\> Start-Process "https://wordpress.org/latest.zip"
PS C:\>
```

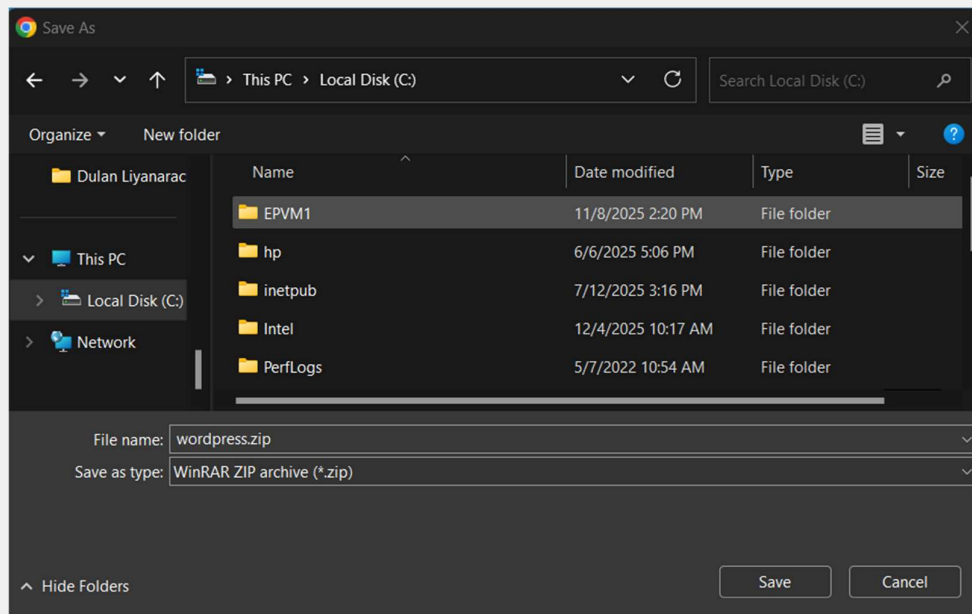

Dulan Nithila Liyanarachchi

The file will start downloading immediately after opening the above website. If it is not working open

<https://wordpress.org/latest.zip> or go to

<https://wordpress.org/download/> and download the file manually.

Then save in **c drive C:** with the name **wordpress.zip**.

▼ This PC	xamppsetup.exe	8/5/2025 7:02 PM	Application	148,297 KB
> Local Disk (C:)	wordpress.zip	8/5/2025 8:34 PM	Compressed (zipp...	27,885 KB

Then, copy it to htdocs folder

```
cp C:\wordpress.zip C:\xampp\htdocs\wordpress.zip
```

Go inside the htdocs folder and list the elements to verify the copying is successfully.

```
cd xampp\htdocs
```

```
ls
```

Dulan Nithila Liyanarachchi

Extract the zip file, you will wait for a few minutes as the installation process is much time consuming.

Expand-Archive -LiteralPath c:\xampp\htdocs\wordpress.zip - DestinationPath c:\xampp\htdocs\yourname

```
Administrator: Windows PowerShell
PS C:\> cp C:\wordpress.zip C:\xampp\htdocs\wordpress.zip
PS C:\> cd xampp\htdocs

Expand-Archive
The archive file 'C:\xampp\htdocs\wordpress.zip' expansion is in progress...

Select a Language and Start the configuration

Welcome to WordPress. Before getting started, you will need to know the following items.

1. Database name
2. Database username
3. Database password
4. Database host
5. Table prefix (if you want to run more than one WordPress in a single database)

This information is being used to create a `wp-config.php` file. **If for any reason this automatic file creation does not work, do not worry. All this does is fill in the database information to a configuration file. You may also simply open `wp-config-sample.php` in a text editor, fill in your information, and save it as `wp-config.php`.** Need more help? [Read the support article on wp-config.php](#).

In all likelihood, these items were supplied to you by your web host. If you do not have this information, then you will need to contact them before you can continue. If you are ready...

Let's go!

Set up database connections, all information should be the same as the settings **in** MySQL. **Enter username and password** as your choice.

Below you should enter your database connection details. If you are not sure about these, contact your host.

Database Name	wordpress
	The name of the database you want to use with WordPress.
Username	username
	Your database username.
Password	password Show
	Your database password.
Database Host	localhost
	You should be able to get this info from your web host. If localhost does not work.
Table Prefix	wp_
	If you want to run multiple WordPress installations in a single database, change this.

Submit

Dulan Nithila Liyanarachchi

Run the installation, if the database connection does not work, go back to check your database.

All right, sparky! You've made it through this part of the installation. WordPress can now communicate with your database. If you are ready, time now to...

Run the installation

Give the details as you preferred for the form in the page appeared after running the installation is clicked but remember them as they will be needed in next steps and whenever doing some task in the wordpress

Welcome

Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.

Information needed

Please provide the following information. Do not worry, you can always change these settings later.

Site Title

Username

Username can have only alphanumeric characters, spaces, underscores, hyphens, periods, and the @ symbol.

Password [Hide](#)
Strong

Important: You will need this password to log in. Please store it in a secure location.

Your Email

Double-check your email address before continuing.

Search engine visibility ☐ Discourage search engines from indexing this site
It is up to search engines to honor this request.

Install WordPress

Dulan Nithila Liyanarachchi

When installation is finished then it will show the below output.

Success!

WordPress has been installed. Thank you, and enjoy!

Username dulan

Password *Your chosen password.*

[Log In](#)

Now, Click the login URL at bottom to log into **WordPress Dashboard**.

Username or Email Address

Password

☐ Remember Me

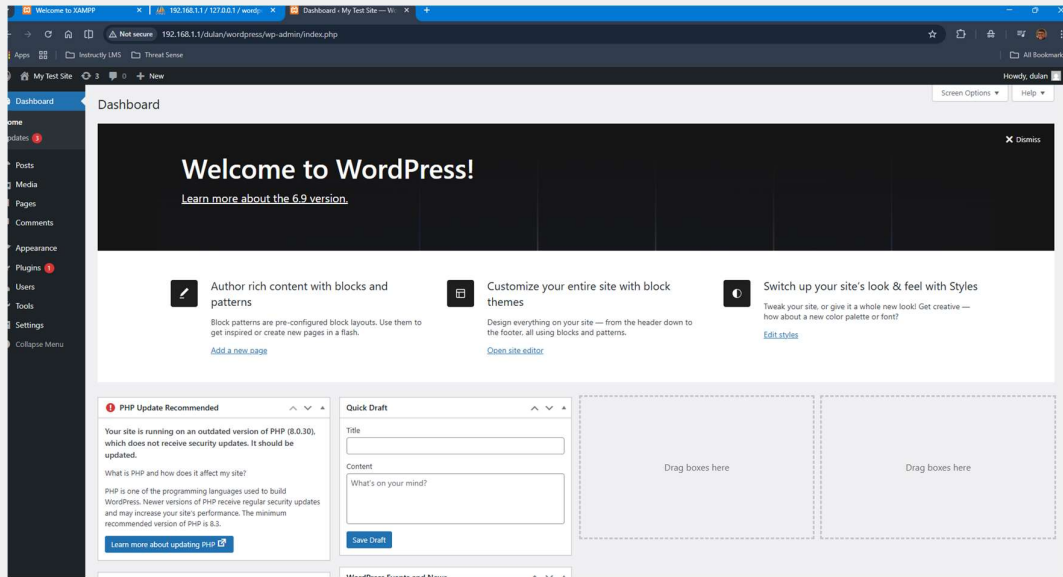

Log In

[Lost your password?](#)

[← Go to My Test Site](#)

Dulan Nithila Liyanarachchi

Enter the **username** and **password** added when **installing wordpress** to login to the **wordpress dashboard**. After logging successfully, it will redirect to **Wordpress Admin Panel** shown below

*** After Logging to wordpress admin dashboard if it shows that your current php version is lower than required which is shown in the image above then the commands below must be performed in addition to upgrade the php version and phpmyadmin version***

Upgrading PHP Version

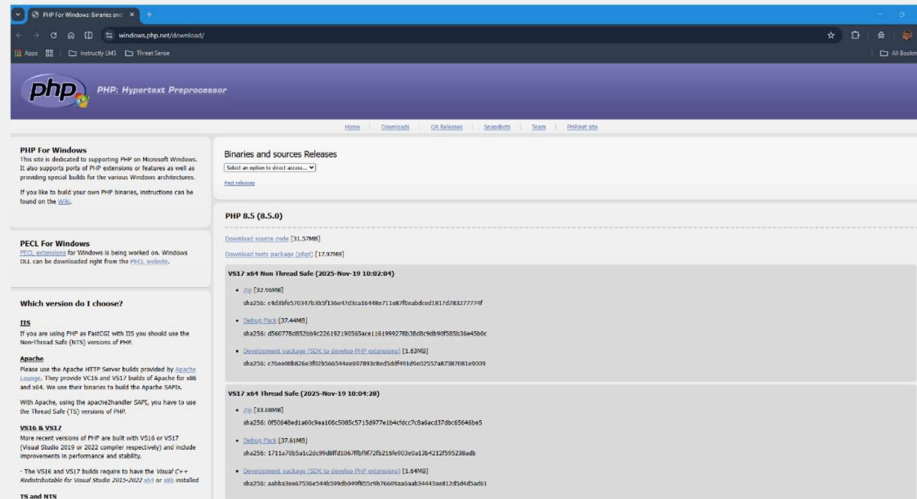

Change the Directory to C drive C:. Then go to the official PHP for Windows page <https://windows.php.net/download/> and Download the zip file of Thread Safe version that matches your system (x64/x86) and Apache version (usually VC15/VS16 for XAMPP 8.x). Example: php-8.2.12-Win32-vs16-x64.zip.

Cd C:

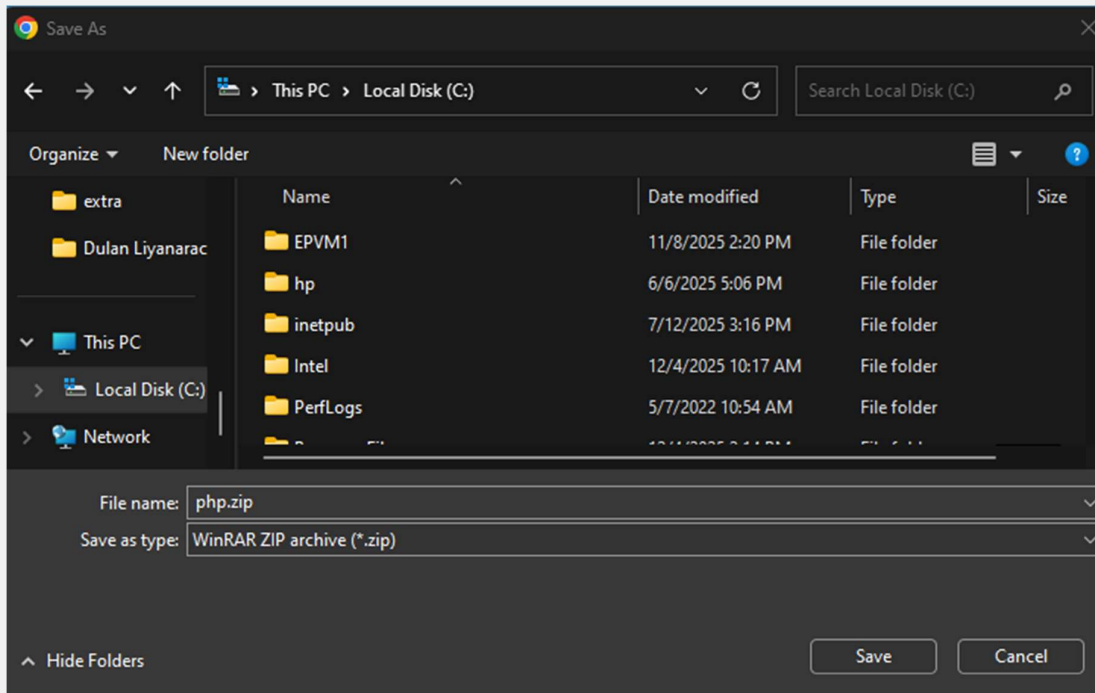

Start-Process https://windows.php.net/download/

Dulan Nithila Liyanarachchi

```
Administrator: Windows PowerShell
PS C:\WINDOWS\system32> cd C:\
PS C:\> Start-Process "https://windows.php.net/download/"
PS C:\>
```

Save it in c drive after downloading finished with the name php.zip

Dulan Nithila Liyanarachchi

Rename the current PHP folder from php to php_old and verify it.

```
Rename-Item -Path "C:\xampp\php" -NewName "C:\xampp\php_old"
```

```
ls C:\xampp\
```

```
Administrator: Windows PowerShell
PS C:\> Rename-Item -Path "C:\xampp\php" -NewName "C:\xampp\php_old"
PS C:\> ls C:\xampp\

Directory: C:\xampp

PS C:\>
```

Open php.ini file using file explorer in text editor

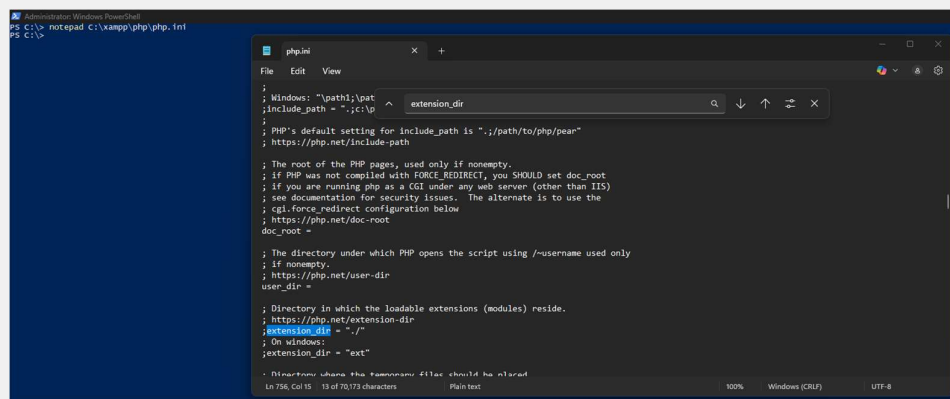

```
notepad C:\xampp\php\php.ini
```

Dulan Nithila Liyanarachchi

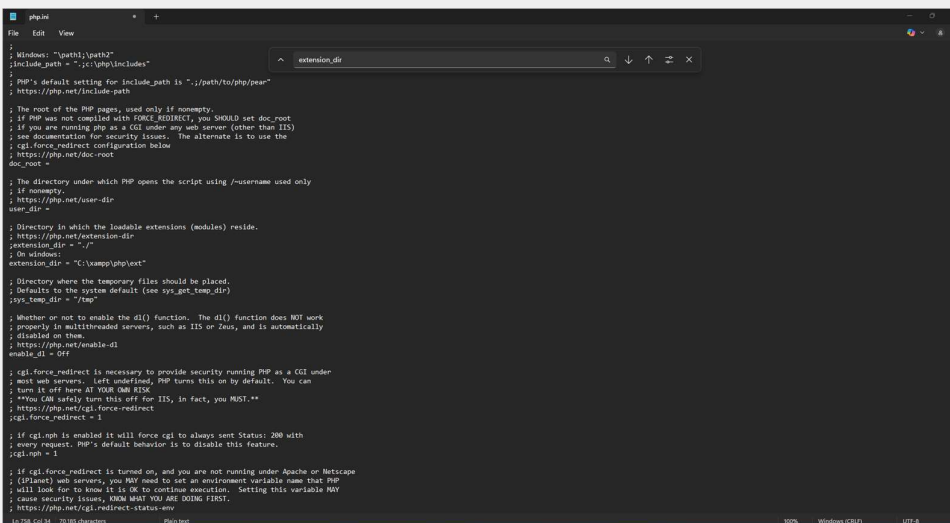

Press ctrl+F and search for `extension_dir` in that. Then you will find the following component

```
; Directory in which the loadable extensions (modules) reside.  
; https://php.net/extension-dir  
;extension_dir = "./"  
; On windows:  
;extension_dir="ext"
```

In that uncomment the last line (removes the `;` from beginning and replace the path with `C:\xampp\php\ext` inside double quotes

```

; properly in multithreaded servers, such as IIS or Zeus, and is automatically  
; disabled on them.  
; https://php.net/enable-dl  
enable_dl = Off  
  
; cgi.force_redirect is necessary to provide security running PHP as a CGI under  
; most web servers. Left undefined, PHP turns this on by default. You can  
; turn it off here at YOUR OWN RISK.  
; *You can safely turn this off for IIS, in fact, you MUST.*  
; https://php.net/cgi.force-redirect  
;cgi.force_redirect = 1  
  
; If cgi.force_redirect is enabled it will force cgi to always sent Status: 200 with  
; every request. PHP's default behavior is to disable this feature.  
;cgi.rfp = 1  
  
; If cgi.force_redirect is turned on, and you are not running under Apache or Netscape  
; (iPlanet) web servers, you MAY need to set an environment variable name that PHP  
; will look for to know it is OK to continue execution. Setting this variable MAY  
; cause security issues, KNOW WHAT YOU ARE DOING FIRST.  
; https://php.net/cgi.redirect-status-env  
cgi.redirect_status_env =
```

Dulan Nithila Liyanarachchi

Then uncomment the following 2 extensions(remove the ; in start of each extension). Imagick extension will not be there in the file. In that case add them manually as a new line.

```
extension=curl
extension=exif
extension=fileinfo
extension=gd
extension=intl
extension=imagick
extension=mbstring
extension=mysqli
extension=openssl
extension=pdo_mysql
extension=zip
```

Also Increase the max_execution_time from 30 to 300

In the same file php.ini search for allow_url_fopen and make it open as below mentioned.

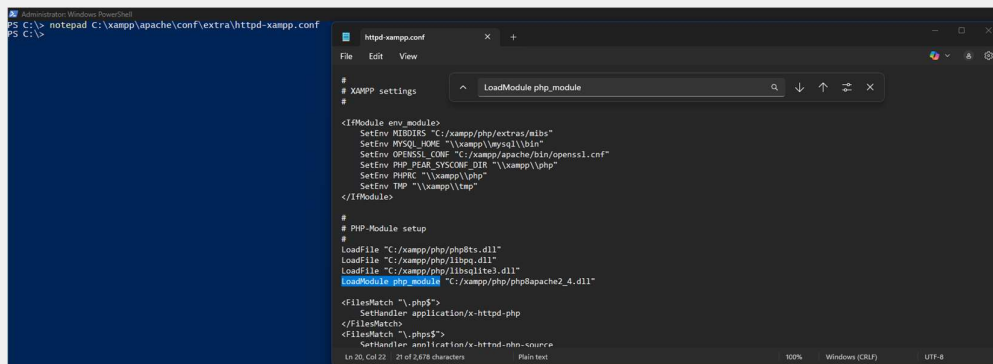

```
allow_url_fopen = On
```

Dulan Nithila Liyanarachchi

Open C:\xampp\apache\conf\extra\httpd-xampp.conf

```
notepad C:\xampp\apache\conf\extra\httpd-xampp.conf
```

```
Then Ensure the LoadModule php_module path points to the new
PHP php8apache2_x.dll. Example: LoadModule php_module
"C:/xampp/php/php8apache2_4.dll"
```

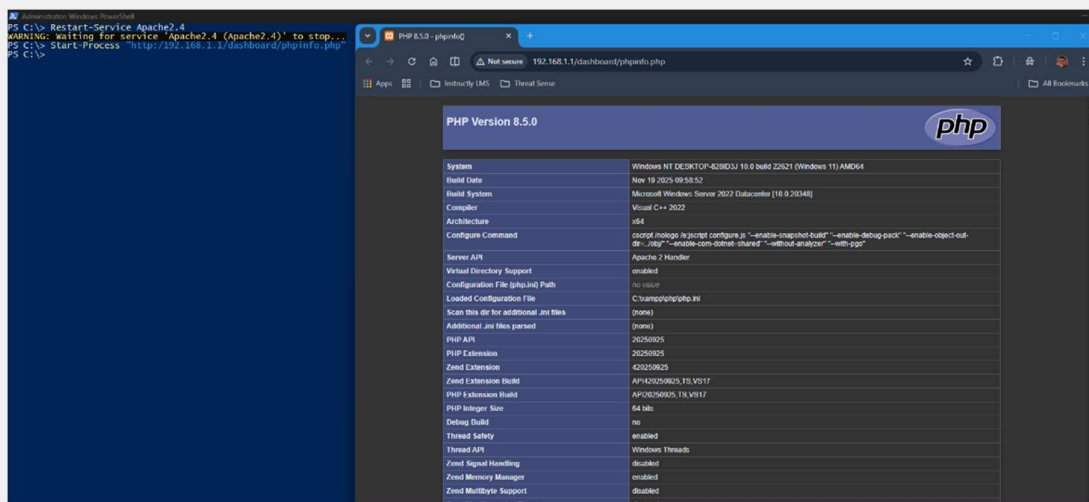

Restart The Apache Service

Restart-Service Apache2.4

Verify the update by running **http://localIP/dashboard/phpinfo.php**

```
Start-Process "http://localIP/dashboard/phpinfo.php"
```

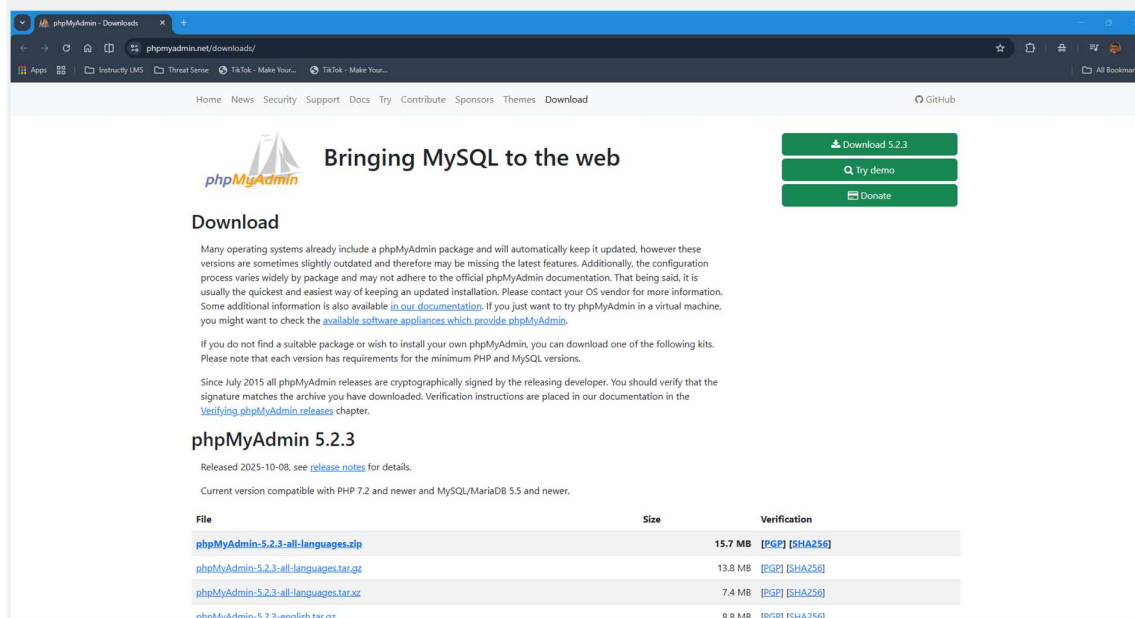

Upgrading PhpMyAdmin Version

Go to the official PhpMyAdmin Downloading Website

<https://www.phpmyadmin.net/downloads/> and Download the All-Languages zip file. Example: phpMyAdmin-5.2.3-all-languages.zip.

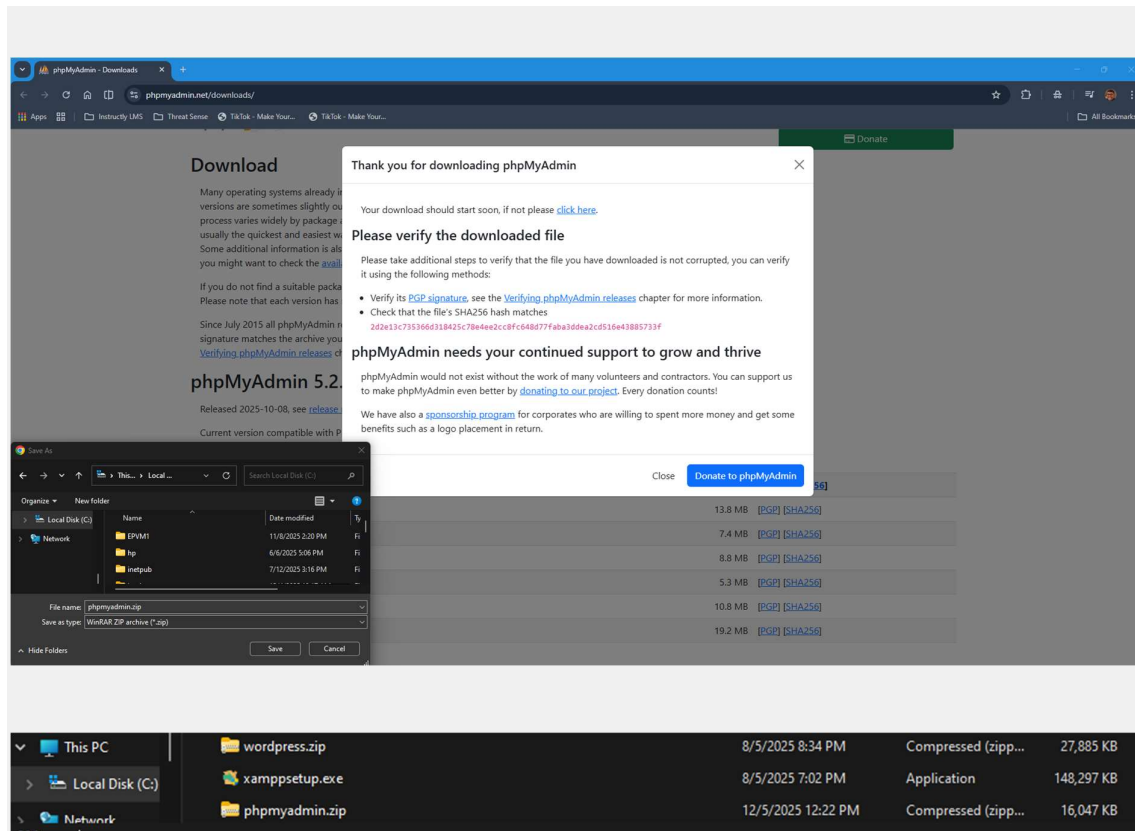

Start-Process <https://www.phpmyadmin.net/downloads/>

```
Administrator: Windows PowerShell
PS C:\> Start-Process https://www.phpmyadmin.net/downloads/
PS C:\>
```

Save it in c drive after downloading finished with the name phpmyadmin.zip

Dulan Nithila Liyanarachchi

Rename the current PHPMysqlAdmin folder from phpMyAdmin to phpMyAdmin_old and verify it.

```
Rename-Item -Path "C:\xampp\phpMyAdmin" -NewName  
"C:\xampp\phpMyAdmin_old"  
ls C:\xampp\
```

```
Administrator: Windows PowerShell
PS C:\> Rename-Item -Path "C:\xampp\phpMyAdmin" -NewName "C:\xampp\phpMyAdmin_old"
PS C:\> ls C:\xampp\

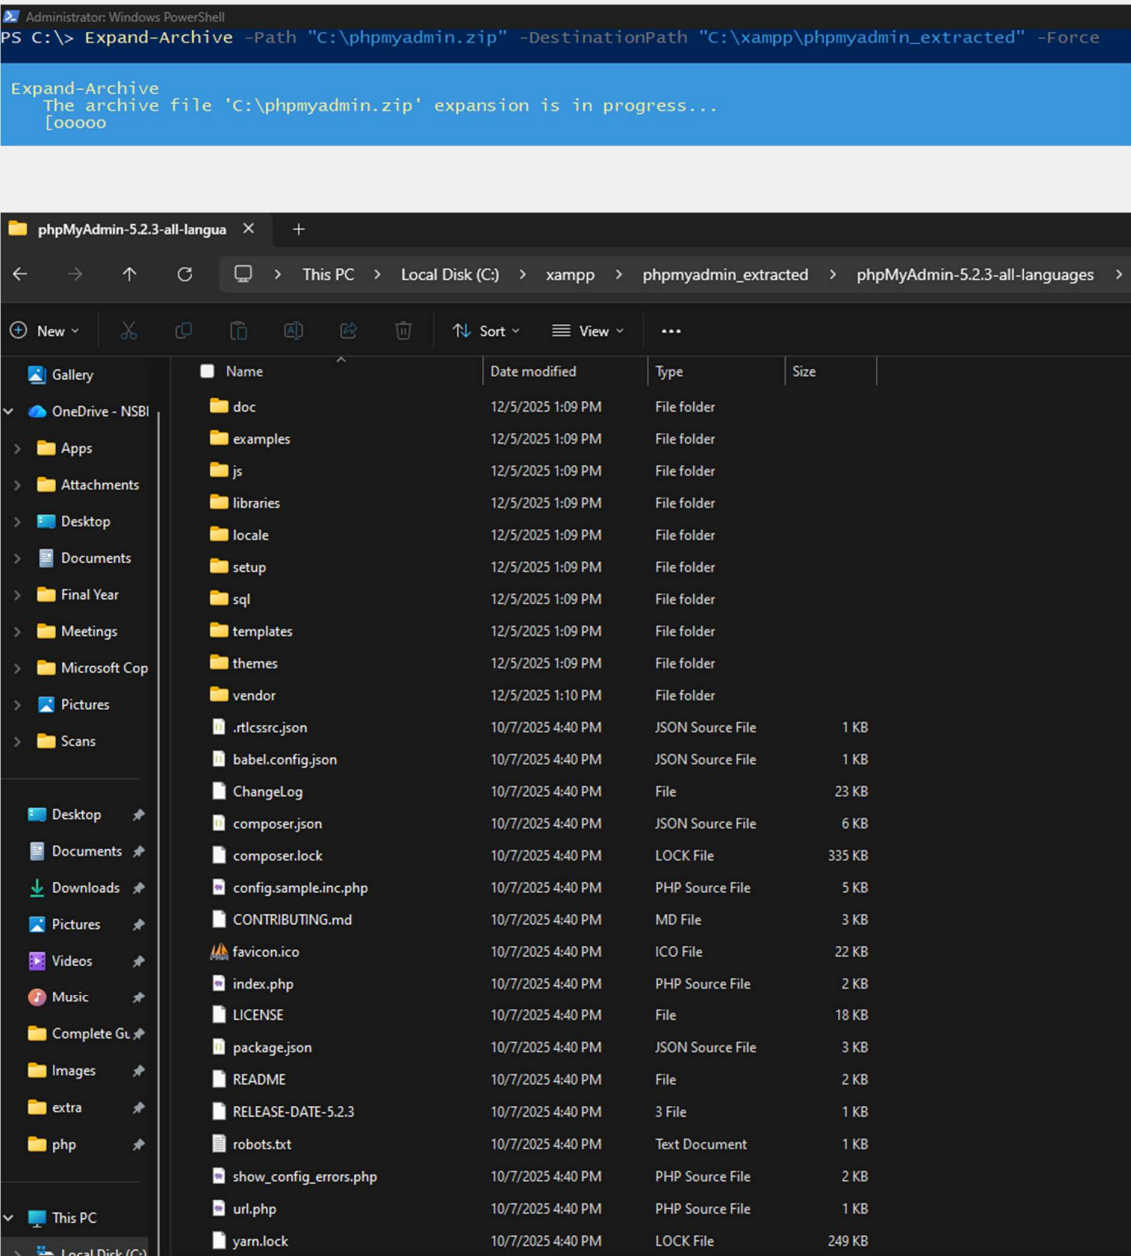

Directory: C:\xampp

```

Extract the ZIP

```
Expand-Archive -Path "C:\phpmyadmin.zip" -DestinationPath
"C:\xampp\phpmyadmin_extracted" -Force
```

Dulan Nithila Liyanarachchi

The screenshot shows a Windows PowerShell window and a File Explorer window. The PowerShell window is running the command `Expand-Archive -Path "C:\phpmyadmin.zip" -DestinationPath "C:\xampp\phpmyadmin_extracted" -Force`. The output shows the expansion process starting with `Expand-Archive` and `The archive file 'C:\phpmyadmin.zip' expansion is in progress...`. The File Explorer window shows the contents of the `phpMyAdmin-5.2.3-all-languages` folder, which includes various files and subfolders.

PS C:\> Expand-Archive -Path "C:\phpmyadmin.zip" -DestinationPath "C:\xampp\phpmyadmin_extracted" -Force

Expand-Archive
The archive file 'C:\phpmyadmin.zip' expansion is in progress...
[oooooooo]

phpMyAdmin-5.2.3-all-languages

Dulan Nithila Liyanarachchi

Find the extracted folder and move it to xampp with the name phpMyAdmin

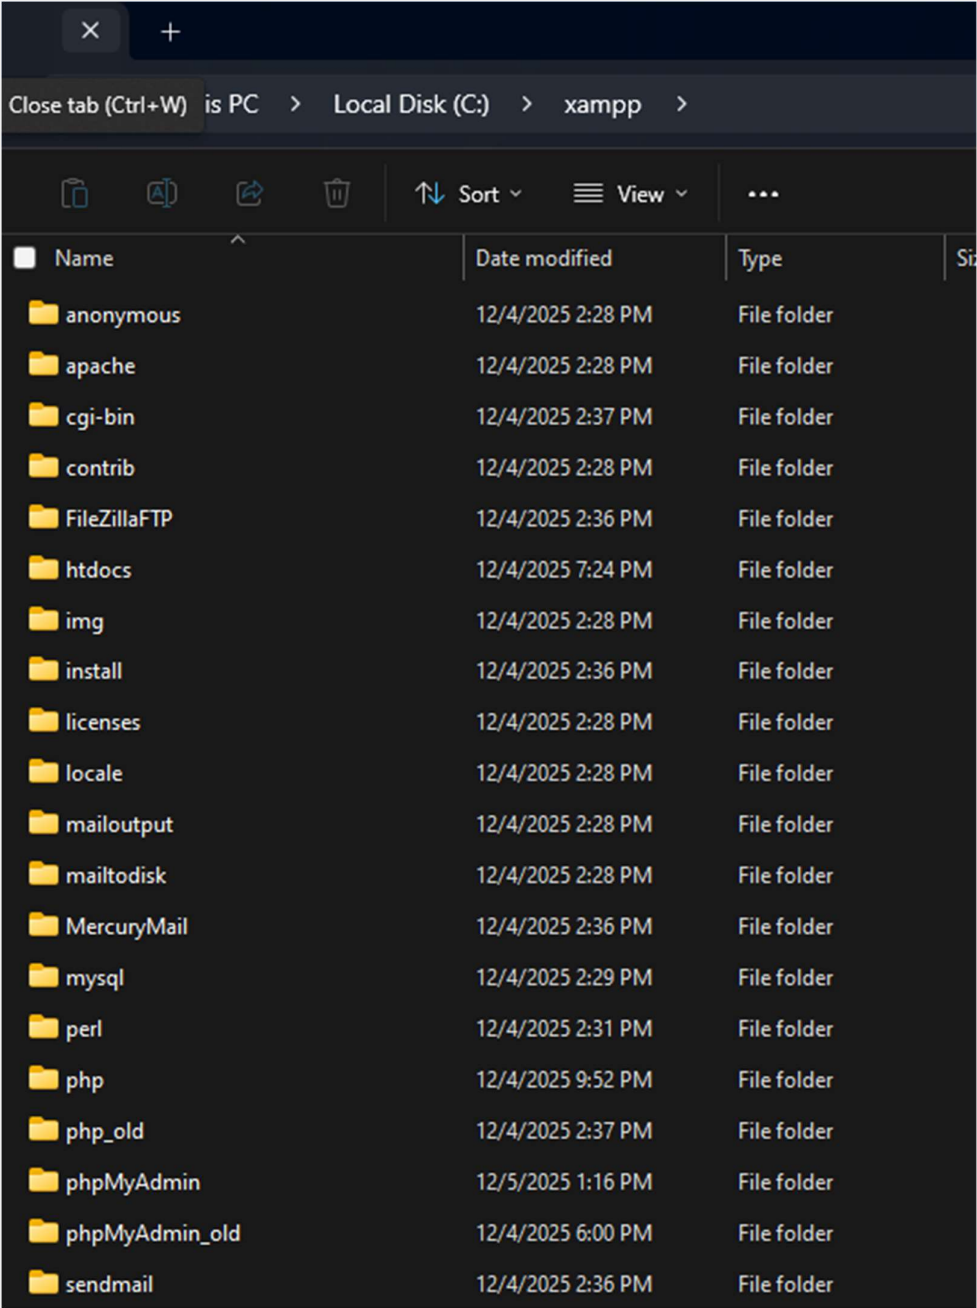

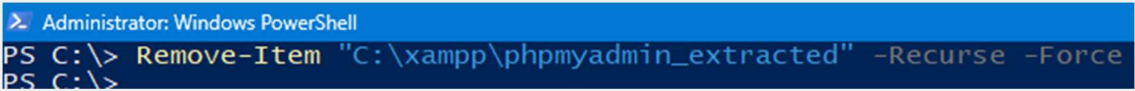

```
Copy-Item "C:\xampp\phpmyadmin_extracted\" $(Get-ChildItem 'C:\xampp\phpmyadmin_extracted' -Directory | Select-Object -First 1)\*" "C:\xampp\phpMyAdmin" -Recurse -Force
```

```
Administration: Windows PowerShell
PS C:\> Copy-Item "C:\xampp\phpmyadmin_extracted\" $(Get-ChildItem 'C:\xampp\phpmyadmin_extracted' -Directory | Select-Object -First 1)\*" "C:\xampp\phpMyAdmin" -Recurse -Force
PS C:\>
```

Delete the phpmyadmin_extracted folder

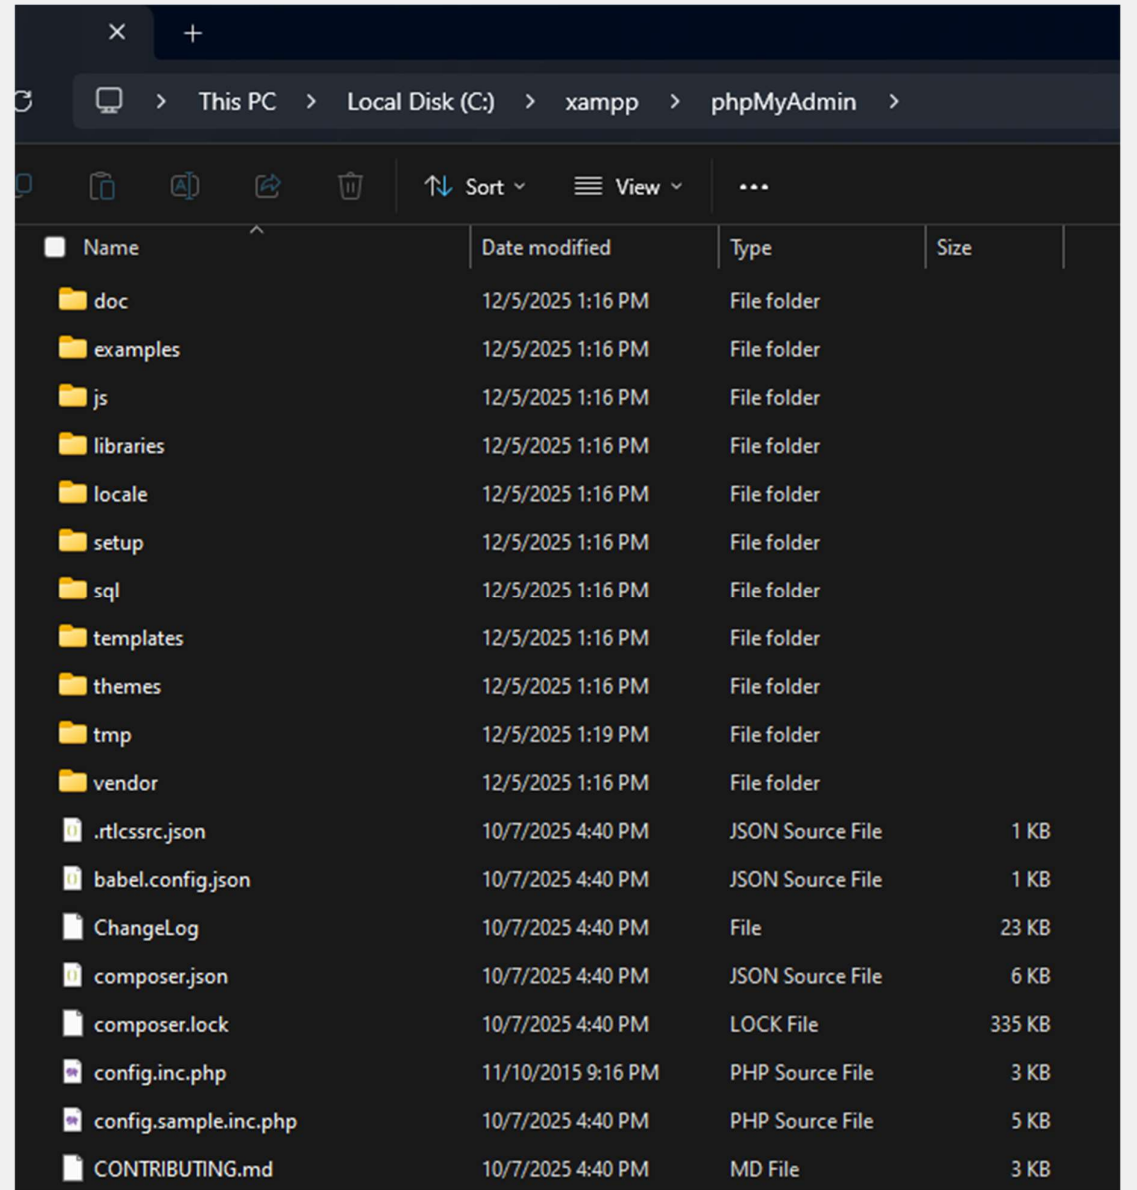

```
Remove-Item "C:\xampp\phpmyadmin_extracted" -Recurse -Force
```

Dulan Nithila Liyanarachchi

Copy the config.inc.php from old phpMyAdmin folder into the new folder.

```
Copy-Item "C:\xampp\phpMyAdmin_old\config.inc.php"
"C:\xampp\phpMyAdmin" -Force
```

Dulan Nithila Liyanarachchi

Make sure phpMyAdmin's **temp** folder exists:

C:\xampp\phpMyAdmin\tmp

```
Administrator: Windows PowerShell
PS C:\> ls C:\xampp\phpMyAdmin

Directory: C:\xampp\phpMyAdmin

Mode                LastWriteTime         Length Name
----                -

PS C:\>
```

If not then create it. Give write permission. (Right-click the folder → Properties → Security → Edit → Allow "Modify")

```
New-Item -Path "C:\xampp\phpMyAdmin\tmp" -ItemType Directory -Force
```

```
icaccls "C:\phpMyAdmin\tmp" /grant "Everyone:(OI)(CI)M" /T
```

Restart The Apache Service

```
Restart-Service Apache2.4
```

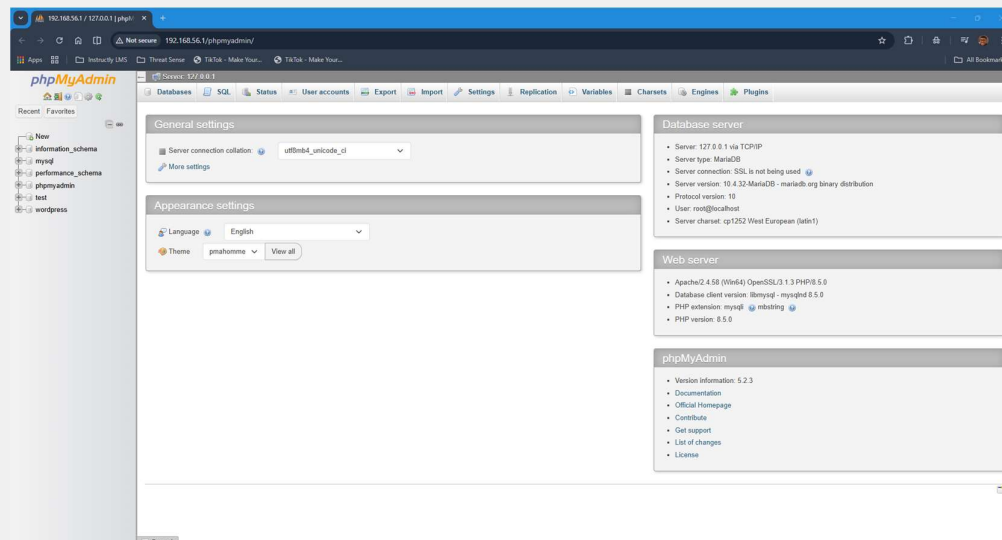

Dulan Nithila Liyanarachchi

```
Administrator: Windows PowerShell
PS C:\> Restart-Service Apache2.4
WARNING: Waiting for service 'Apache2.4 (Apache2.4)' to stop...
WARNING: Waiting for service 'Apache2.4 (Apache2.4)' to start...
```

Verify the update by running `http://localIP/
dashboard/phpmyadmin`

`Start-Process "http://localIP/phpmyadmin"`

```
Administrator: Windows PowerShell
PS C:\> Start-Process "http://192.168.56.1/phpmyadmin/"
PS C:\>
```

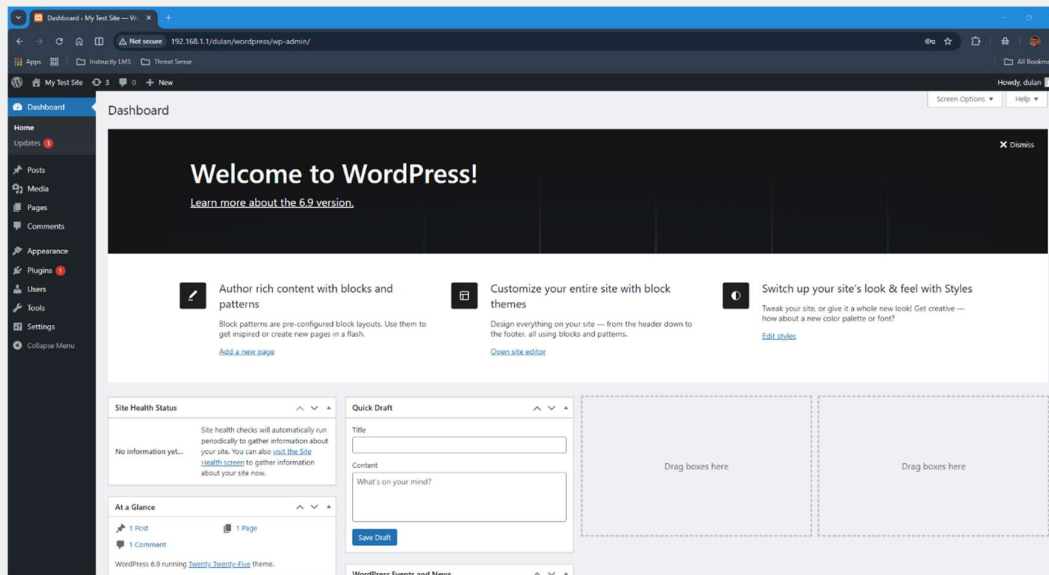

Close the PowerShell.

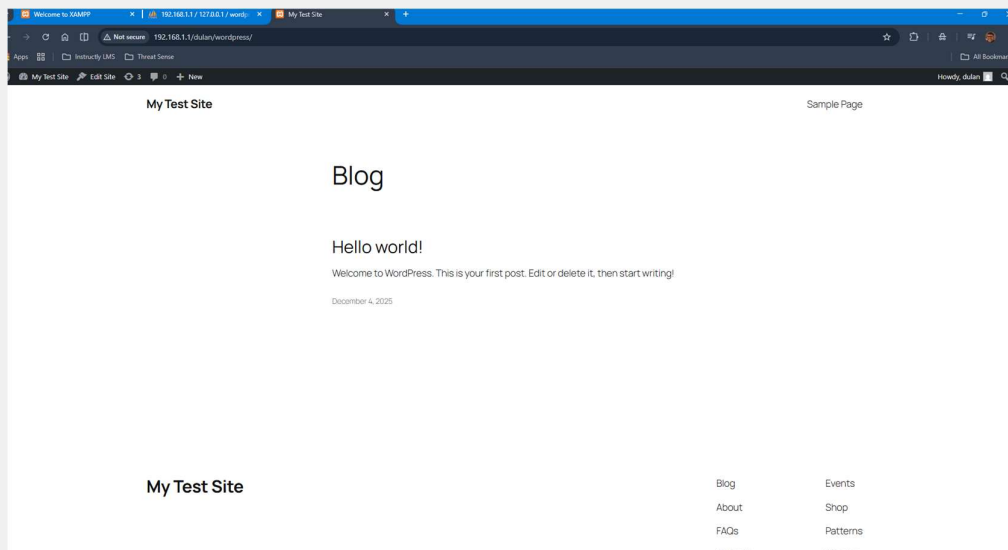

*** Now continue back to the previous process ***

Refresh the wordpress admin page and see if the php error message should be disappear. If not do the above steps to upgrade the php version.

Dulan Nithila Liyanarachchi

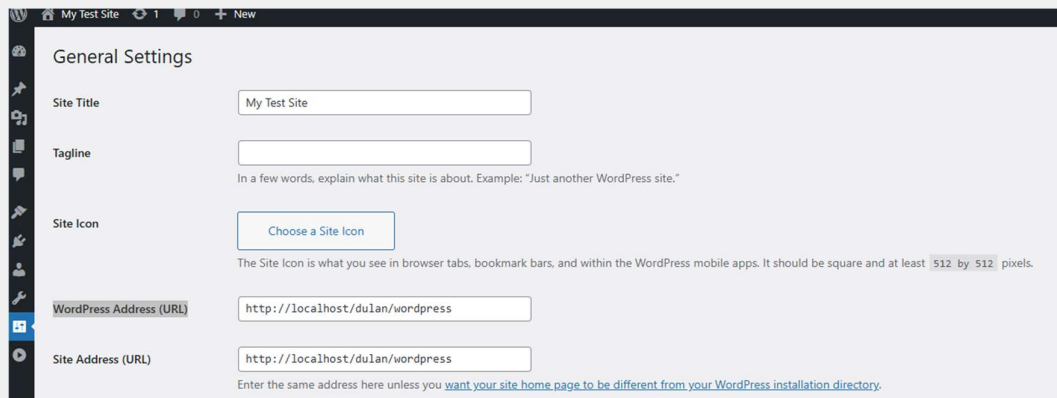

Click The **Button with the name of site you gave when installation** on left side of the navbar to open **wordpress website** which is created **automatically at Installation**

In the wordpress Dashboard Go to Settings and change the localIP in website WordPress Address (URL) and Site Address (URL) to localhost because localIP is changing every time whenever there is a change in the local network.

Dulan Nithila Liyanarachchi

Before finishing all the stuff open powershell and stop both services apache and mysql. After stopping verify that they are stopped and not.

Stop-Service Apache2.4

Get-Service a*

Stop-Service MySQL

Get-Service m*

```
Select Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Install the latest PowerShell for new features and improvements! https://aka.ms/PSWindows

PS C:\WINDOWS\system32> Stop-Service Apache2.4
WARNING: Waiting for service 'Apache2.4 (Apache2.4)' to stop...
PS C:\WINDOWS\system32> Get-Service a*

PS C:\WINDOWS\system32>
```

Dulan Nithila Liyanarachchi

Now to open the **wordpress site** whenever needed use the following commands

Go to **C: drive**

```
cd c:\
```

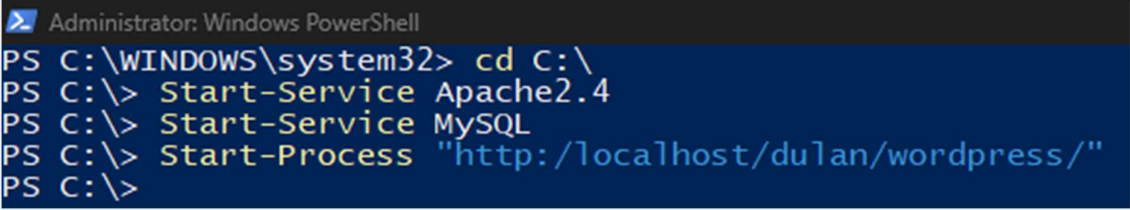

Start The Apache 2.4 and MySQL Services

```
Start-Service Apache2.4
```

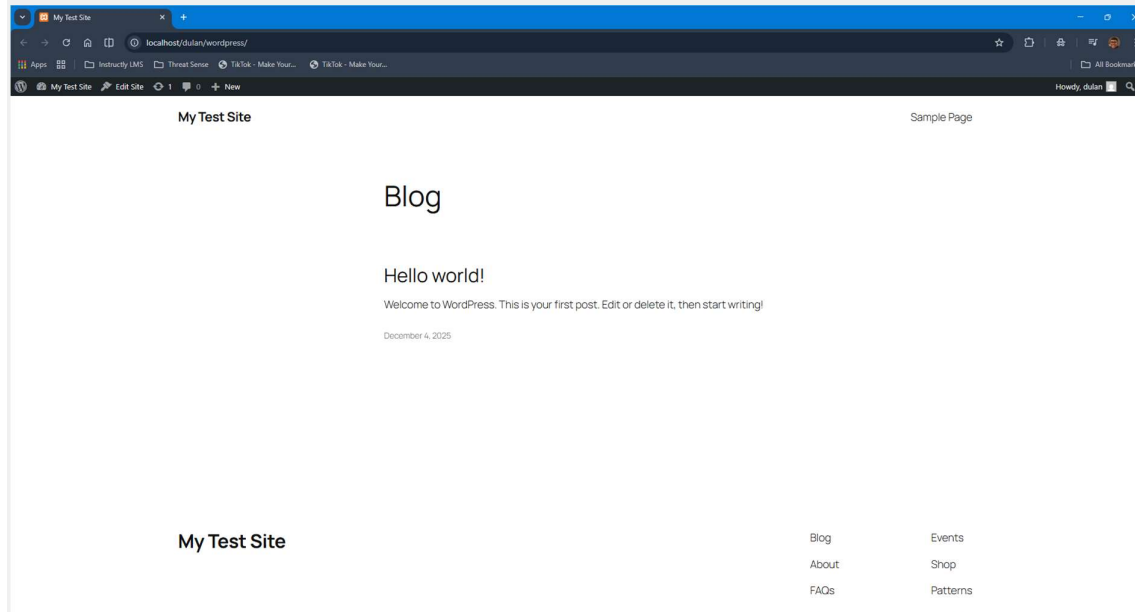

```
Start-Service MySQL
```

Go to **http://localhost/yourname/wordpress**

```
Start-Process "http://localhost/yourname/wordpress"
```

```
Administrator: Windows PowerShell
PS C:\WINDOWS\system32> cd C:\
PS C:\> Start-Service Apache2.4
PS C:\> Start-Service MySQL
PS C:\> Start-Process "http://localhost/dulan/wordpress/"
PS C:\>
```

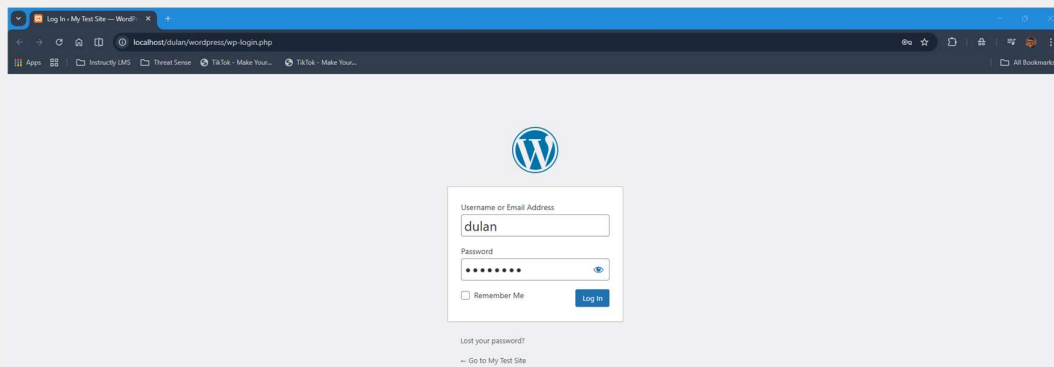

Dulan Nithila Liyanarachchi

To go to wordpress Admin panel Go to

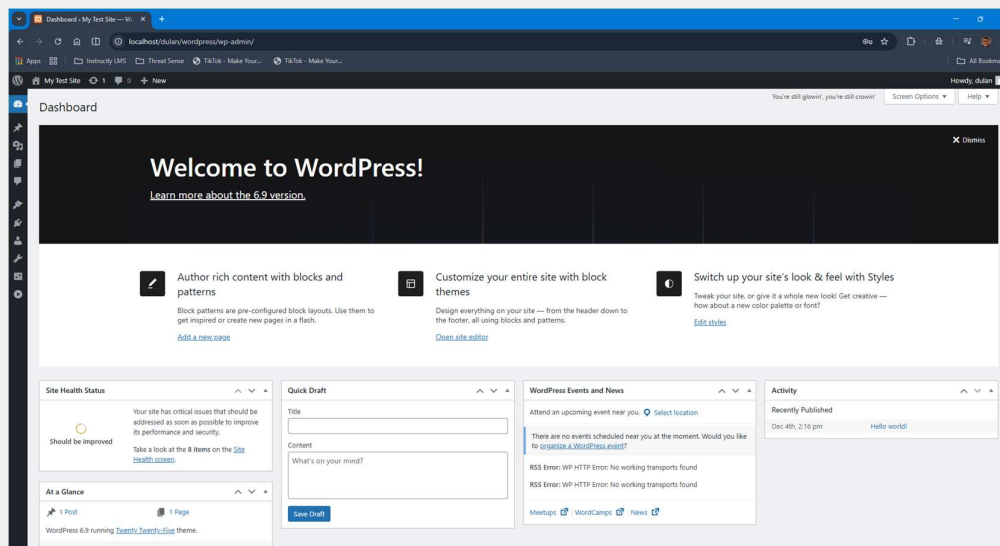

`http://localhost/yourname/wordpress/wp-login.php`

Start-Process `http://localhost/yourname/wordpress/wp-login.php`

```
Administrator: Windows PowerShell
PS C:\> Start-Process "http://localhost/dulan/wordpress/wp-login.php"
PS C:\>
```

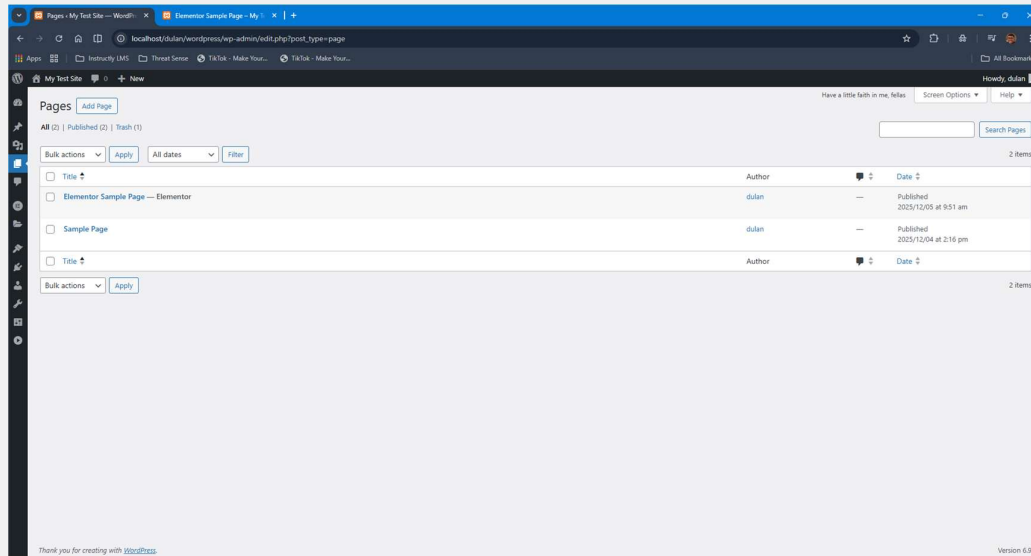

Then Login

Dulan Nithila Liyanarachchi

Can search for any free builder plugin like elementor or divi from the add plugin page, install and activate it if needed.

Make sure to stop both services when work is finished

Stop-Service Apache2.4

Stop-Service MySQL

```
Administrator: Windows PowerShell
PS C:\> Stop-Service Apache2.4
